

Permixx

Permixx: Parkmobile's electronic parking permit management solution

Permit management is for many local authorities an administrative headache. At the same time it is also a regular frustration for the public who have to go to a parking shop to apply or renew their parking permits.

Permixx offers both the councils and the public a fully web-enabled solution to manage their electronic parking permits. This system offers the public a quick and flexible alternative to manage all their permit related matters 24/7 over the Internet. It enables the councils to improve their service levels to the public, reduce paper work and cut operating costs.

Permixx: managing different types of permits

A wide range of parking permits can be issued and managed through Permixx, e.g. residents' permits and business permits including doctor's permits. The system can also handle disabled permits, temporary exemptions, visitor's permits and contractor permits.

Fraud-proof electronic permits

Permixx supports the distribution of electronic parking permits using the vehicle registration number as the permit reference, or in the form of a RFID transponder card, or as a barcode sticker. An electronic permit is issued to the permit holder only once, any changes can be updated onto the permit without a new permit being issued. By replacing paper permits with electronic permits, the councils could eliminate fraud, save costs and maximise flexibility.

Permixx: a 24/7 quick and flexible online system for the public

Permixx allows the public to apply for different types of parking permits online. Existing permit holders can renew their permits, change details and make payment via their own online personal pages, or they can submit a request for a termination and refund. Permit applicants can consult the status of their application online, they can collect personal messages from the council staff dealing with their application.

Permixx: geared to the council's specific requirements

In close collaboration with the council, Permixx can be designed to integrate seamlessly with the council's infrastructure. It can be linked to the back-office systems of the parking services and other departments in the council. This system comes complete with a management information system that has the capacity to link to any financial systems. Once implemented, Permixx will enable the council to make many changes to the permits themselves.

Permixx: easy interface with other systems and databases

Permixx can be easily linked to other systems and databases within the council, e.g. validate a vehicle registration number against a resident's permit number in the relevant databases, or even check the particulars against the council tax register.

The benefits of Permixx

- 24/7 quick and flexible online access for the public;
- a cost effective system that eliminates fraud, reduces paper work and increases customer service levels;
- a tailored system that seamlessly integrates with the council's infrastructure;
- a wide range of parking permits can be issued and managed through Permixx;
- easy interface with other systems and databases.
